

Microbiology Report - John Smith (DEMO-SEP-01)

MRN 00384921 | Collected on admission, day 12 hours prior to this report

Urine Culture

Result: E. coli, >100,000 CFU/mL
Sensitive to: Ceftriaxone, Piperacillin-Tazobactam, Meropenem
Resistant to: Ampicillin, Trimethoprim-sulfamethoxazole

Blood Culture (2 sets)

Set 1: Positive at 14 hours - E. coli, same organism as urine
Set 2: Positive at 16 hours - E. coli, concordant

Procalcitonin Trend

Admission: 42 ng/mL
24h recheck: 28 ng/mL (improving on current antibiotics)

Interpretation

Gram-negative bacteremia secondary to urosepsis, source confirmed. Current empiric Piperacillin-Tazobactam + Vancomycin covers isolate. Vancomycin may be discontinued given gram-negative-only growth pending clinical correlation.
