

Cardiac Catheterization Report - Robert Chen (DEMO-MI-01)

MRN 00472610 | Procedure performed emergently on arrival

Indication

STEMI, anterior wall, door-to-balloon target <90 min

Findings

LAD: 100% occlusion, proximal segment

LCx: 40% stenosis, non-flow-limiting

RCA: mild luminal irregularity, no significant stenosis

Intervention

Successful PCI of proximal LAD with drug-eluting stent. TIMI 3 flow restored.

Door-to-balloon time: 62 minutes.

Post-Procedure Plan

Dual antiplatelet therapy (Aspirin + Ticagrelor) x 12 months. Continue statin, beta-blocker, ACE inhibitor once hemodynamically stable. CCU admission overnight.
