

Neuroimaging Report - Dorothy Williams (DEMO-CVA-01)

MRN 00603847 | CT head non-contrast + CT angiography, performed on arrival

CT Head (non-contrast)

No acute hemorrhage. Hyperdense right MCA sign, suggestive of acute thrombus.
No established infarct or mass effect at time of scan.

CT Angiography Head/Neck

Occlusion of the right M1 segment, middle cerebral artery.
Carotid arteries patent bilaterally, no significant stenosis.

Impression

Acute right MCA large vessel occlusion. Findings support tPA administration and urgent mechanical thrombectomy, consistent with 75-minute last-known-well-to-door time.
